

RES ONE™ WORKSPACE CORE

Your Start on the Path to Managed, Secured and Automated Workspaces

The digital workforce is no longer tied to physical devices in one location. Today, workers choose where and how they work, often across multiple devices. To support these hybrid environments, many IT leaders are well down the path of optimizing their workspaces through virtualization, cloud and other enabling technologies. How can IT improve the manageability of these hybrid environments without putting strain on the budget?

THE SOLUTION: A FREEMIUM FOUNDATION FOR WORKSPACE MANAGEMENT

RES ONE Workspace Core is a foundational workspace management technology that provides the core capabilities needed for a centralized and secure endpoint strategy. It works across physical and virtual environments and ensures a consistent user experience.

RES ONE Workspace Core is a freemium offering that helps IT teams to:

- Increase worker productivity
- Lower the cost of IT operations
- Build a foundation for security and compliance

OPTIMIZE YOUR DIGITAL WORKSPACE WITHOUT DISRUPTING PRODUCTIVITY

RES ONE Workspace Core offers an essential foundation for digital workspaces that drive productivity for the workforce. It provides workers with a familiar and seamless workspace experience across hybrid environments that is both secure and dynamic based on context.

As the leading freemium offering, RES ONE Workspace Core allows IT to begin simplifying the management of physical and virtual endpoints today to build a foundation for more advanced personalization, security and automation. RES ONE Workspace Core enables organizations to create a single, global profile image that is centrally managed, context aware and integrates out-of-the box with leading VDI solutions from Citrix, Microsoft and VMware.

Uses for RES ONE Workspace Core

Global Context Awareness Controls

IT needs to manage different access and privileges across multiple groups of similar users. An example of a common challenge is providing the correct printer access rights based on location. Similarly, given the device and its location, access to apps will vary. Core enables IT to manage access based on context triggers of device and location.

Simplify VDI Management

As companies plan to move some workers to virtual environments, VDI deployments can stall due to the complexity of the project, and lack of adoption by the workforce due to poor user experience. RES ONE Workspace Core makes VDI a more seamless experience for users, providing an easier, streamlined way to better manage endpoint settings.

Streamline Profile Configuration Management

IT requires a workspace management solution that is easy to implement and can scale across the enterprise. RES ONE Workspace Core allows IT to centrally manage critical aspects of a user's profile and more, eliminating time spent on managing profile corruption and other issues.

GROW WITH RES

When organizations move beyond RES ONE Workspace Core into the paid version, they gain greater flexibility and more granularity in how they can manage workspaces at the group or individual user level. This allows for greater personalization for the worker, while still streamlining the ongoing maintenance with IT. For example, in the paid version IT could have different workspace settings configured for a worker logging into their virtual environment vs their physical device. Additionally, email settings can be configured and managed with the paid version. Finally, the paid version has additional capabilities for both securing and governing application usage of the workspace helping to solve challenges around reducing risk and reducing costs around software license management.

EXPAND BEYOND CORE INTO THESE AREAS WITH KEY CAPABILITIES

Composition — provides workspace management capabilities to help unify the workspace experience for the workforce.

Security — effectively protects against internal and external threats by locking down the endpoint.

Governance — ensure compliance through workspace insight and visibility.

Automation — lowers the cost of IT operations and enables better allocation of IT staff and skills.
